Power On / Power Off / Fingerprint

In the power-off state, press and hold the power button  for 2 seconds to turn on the AYANEO. The indicator light turns in white with high brightness, and the light returns to normal brightness after entering the system interface.

In the power-on state, press and hold the power button  for 2 seconds, and a pull-down power-off menu will pop up at the top of the screen. At the same time, press and hold the power button and touch down and slide "slide to turn off the computer" to complete the shutdown of AYANEO. Or click the screen Window  > Power  > Shut Down to turn off AYANEO .

In the power-on state, press and hold the power button  for about 8 seconds to forcibly turn off AYANEO. (Note: This operation is not recommended for normal usage as it may cause a risk of data corruption)

Fingerprint recognition is supported. You need to log in to your Microsoft account or set up your own local account and password to enable the Windows Hello biometric function before you can set up the fingerprint recognition function normally.

In the Windows 11 desktop view, Window  > Settings  > Accounts  > Sign-in Options >  Fingerprint Identification (Windows Hello) , register fingerprints for secure login, and each account supports a maximum of ten fingerprints.

Wake up from sleep

In the power-on state, press the power button  and then AYANEO goes to sleep, or click on the screen Window  > Power  > Sleep . When sleeping, the cooling fan stops rotating, and the indicator light breathes slowly and regularly with white light.

In the sleep mode, tap the power button  to wake up AYANEO, and the fingerprint supports S3 deep wake-up. If Windows Hello has been configured with fingerprint security login, tap the power button for about 2 seconds to wake up directly to the OS interface with the finger that has registered the fingerprint in the sleep mode, or tap the power button to wake up the screen and then tap the fingerprint recognition to enter the OS interface. No need to enter a PIN or password to log in. After a successful wake-up, the light of the joystick is always in white (default), and the cooling fan rotates normally. In different interfaces, it takes 1-3 seconds to complete the wake-up after the screen is turned on.

Volume

Tap the volume + button  to increase the volume step by step, long press to increase the volume continuously. Tap Volume +  to decrease the volume. Or click the volume icon  in the lower right corner of the system desktop interface, and slide the pop-up menu to adjust the volume .
